

Stages	Entry Point	Authentication	Initial Assessment	Health Rating	Focus Selection	System Processing	Plan Generation	Review Plan	Exit System
User Actions	Opens the system and sees login/create account option	Logs in or creates an account	Inputs medical history, lifestyle details	Rates physical and mental health	Selects area of survivorship focus (e.g., nutrition, activity)			Views generated care plan and recommendation	Logs out
System Interaction	System prompts for login or account creation	System stores credentials and logs user in	System validates and stores user inputs	System records ratings	System stores preference	System stores data, processes inputs, calls AI for plan generation	AI (OpenAI) generates survivorship care plan and recommendations	System displays personalized dashboard with plan	Session end
Touchpoints	Web interface (HTML, CSS, JS)	Login/Create Form	Input forms (HTML forms)	Sliders/Rating UI	Dropdown / Option buttons	Backend (Flask, Node.js, MongoDB, Python)	AI module	Dashboard UI (React-based)	Logout button
Pain Points	Confusion if entry point is not clear	Forgot password, account creation delay	Form length or complexity	Lack of clarity on scale	May be unsure what each area includes	Delay in processing	AI-generated content may lack personalization	Plan might be too text-heavy or hard to navigate	Might forget to log out
Opportunities for Improvement	Add a guided start (e.g., "New user? Start here")	Add SSO or social login options	Progressive disclosure or section-wise saving	Add tooltips or examples for rating scales	Add brief description of focus areas	Add a loading indicator or estimated time shown	Add feedback options for users to rate suggestions	Add sections with visual aids (graphs, icons, etc.)	Auto-log out after inactivity
